Application: Full-Stack Developer (Python, Vue 3 & AI)

Dear Hiring Team,

For more than three years I have been working as a **Full-Stack Developer**, building web applications and AI platforms that are used in production every day. I would like to bring this experience to your team, either in Munich or remotely.

I joined **KERAVONOS GmbH** in Gummersbach in March 2023: first as an intern, then as a working student alongside my computer science degree at TH Köln (**B.Sc., 2025**), and since October 2025 as a full-time software developer. There I helped build **Pronto**, a B2B sales platform that detects buying signals and uses AI to write personalised sales texts, developed an internal **real-time chat** and delivered client projects for ABUS Kransysteme GmbH. My focus: **Python, FastAPI, Vue 3, TypeScript** and integrating LLMs such as OpenAI and Claude.

In my own time I build and run my own projects end to end, most recently **Belegfluss**, an AI invoice inbox built with **Java, Spring Boot and Spring AI** (JWT login, roles, four-eyes approval), and a **multiplayer browser game** (C#/.NET, WebGL2, 211 automated tests). Both are live, with CI/CD and monitoring on my own server.

I work extensively with **agentic coding** (including Claude Code): I break tasks down, steer AI agents deliberately and verify every result through code review and automated tests. This lets me deliver much faster without compromising on quality or security.

I work independently and reliably, get up to speed quickly on new topics and keep learning, most recently in AI-assisted SEO, network security, and Unity and C#. I communicate confidently in German, English, French and Arabic and hold a German residence permit for skilled workers (Section 18b of the Residence Act), so I can change jobs without a visa process.

I would be delighted to discuss my application with you in a personal interview.

Kind regards

Omar Fourati
